

Contents

1	General questions	5
2	The various approaches to probability theory	7
2.1	Classical probability	7
2.2	Frequency-based (or empirical) approach	9
2.3	The subjective approach: its relevance to Economics and Management	11
3	The axiomatic approach, or the maths of probability	17
3.1	Sample space and events	17
3.2	The axioms	22
3.3	Conditional probability, correlation between events, stochastic independence and Bayes Theorem	30
4	Random numbers	38
4.1	What a random number is	38
4.2	The probability distribution of a random number	42
4.3	Computer simulation of random numbers	50
5	Expected value of (a function of) a random number	53
5.1	Moments	57
5.2	Moment generating function	60
5.3	Conditional random numbers and conditional expectations	67
5.4	A brief summary of standard distributions	68
5.4.1	The Poisson distribution	69
5.4.2	The binomial distribution	69
5.4.3	The exponential distribution	71
5.4.4	The normal distribution	73
5.4.5	The uniform distribution	75
6	Expected utility and certainty equivalent	77
6.1	The problem	77
6.2	The answer to the problem	82
6.3	The estimation of u	84
6.4	The notion of risk-aversion	85
6.5	Some popular utility functions	87
6.5.1	The linear utility	87
6.5.2	The exponential utility	87
6.5.3	The logarithmic utility	88
6.5.4	The isoelastic utility	89
6.5.5	The quadratic utility	89

7	Random vectors: first notions	90
7.1	Notion of random vector	90
7.2	The probability distribution of a random vector	93
7.3	The notion of stochastic independence between two random numbers	98
7.4	The expectation of a random vector	101
7.5	The expectation of a function of a random vector	101
7.6	Second order moments for random vectors	102
7.7	The variance of a linear function of random numbers	109
8	Exercises	122
