

Table of contents

Introduction	XI
---------------------	-----------

Part I Arguments and rationality

1	Rationality and cognitive biases	3
1.1	Normative and descriptive approaches to reasoning	3
1.1.1	Critical Thinking, normative and descriptive	3
1.2	Heuristics and biases	7
1.2.1	Framing effect	9
1.2.2	Hindsight bias	14
1.2.3	Anchoring effect	18
1.3	The value of normative standards	20
1.4	Conclusion	22
2	What is an argument?	23
2.1	Introduction	23
2.2	Arguments and argumentative structure	24
2.2.1	Simple and complex arguments	27
2.3	Good arguments vs. bad arguments	30
2.3.1	Deductive reasoning	32
2.3.2	Good arguments and deductively valid arguments	35
2.3.3	Kinds of non-deductive reasoning	37
2.3.4	Strength and weakness of non-deductive reasoning	40
2.4	Conclusion	41
3	Rational discussion and the pyramid of disagreement	43
3.1	Introduction	43
3.2	Rational discussion	44
3.2.1	The rules of rational discussion	45
3.3	Ways of reacting to disagreement	47
3.4	Conclusion	55

4	How to reply rationally to an argument	57
4.1	The two strategies for attacking an argument	57
4.1.1	Truth, justifiability and plausibility	58
4.2	Attack on the argumentative structure	60
4.2.1	Non-sequitur	61
4.2.2	A fallacy of inductive reasoning: the unwarranted generalization	62
4.2.3	Circular reasoning	63
4.3	Attack on the premises	66
4.3.1	Counterexamples	67
4.3.2	Request for justification	67
4.3.3	Reductio ad absurdum	68
4.4	Conclusion	69

Part II Deductive arguments

5	Deductive arguments	73
5.1	Introduction	73
5.1.1	Semantics and syntax. Classical logic	77
5.2	Propositional reasoning	79
5.2.1	The truth conditions of complex sentences	82
5.2.2	Definability	86
5.2.3	Proving by rules. Natural deduction	92
5.2.4	Assertion and rules of inference	97
5.3	Reasoning with predicates and quantifiers	99
5.3.1	Sentences containing predicates and quantifiers, and their relationships	101
5.3.2	A formal language for reasoning with predicates and quantifiers	105
5.3.3	Some remarks on the logical regimentation of predicates and quantifiers	113
5.3.4	Categorical syllogisms	114
5.4	Conclusion	117
6	Conditional reasoning, I: The material conditional	119
6.1	Introduction	119
6.2	A reasoning problem involving conditionals	121
6.3	The conditional	123

6.3.1	The many kinds of indicative conditional	124
6.3.2	Truth and falsity of indicative conditionals	125
6.4	The material conditional	127
6.4.1	The paradoxes of material implication	129
6.4.2	Inference rules with material conditionals	133
6.4.3	Two fallacies and other rules of inference	134
6.5	Conditionals and necessary and sufficient conditions	137
6.6	Other views of indicative conditionals	140
6.7	An experiment involving modus tollens	142
6.8	Conclusion	145
7	Conditional reasoning, II: The counterfactual conditional	147
7.1	Introduction	147
7.2	The psychology of counterfactual reasoning	150
7.2.1	The importance of counterfactual reasoning	150
7.2.2	The fault lines: which aspects of reality do we modify?	151
7.3	The logic of counterfactuals	154
7.3.1	Indicative and counterfactual conditionals	156
7.3.2	The truth conditions of counterfactuals	157
7.3.3	The Ramsey Test for counterfactuals	158
7.3.4	The semantics of counterfactuals	160
7.3.5	Fallacies of counterfactual reasoning	166
7.4	Counterfactuals and causality	172
7.4.1	The counterfactual test	173
7.4.2	Inadequacy of the counterfactual test	174
7.5	Conclusion	175

Part III

Non-deductive arguments

8	Reasoning with explanatory hypotheses	179
8.1	Introduction	179
8.2	A medical case	180
8.3	Abductive procedures	183
8.3.1	Abduction	183
8.3.2	Inference to the best explanation	185
8.4	An example of reasoning with explanatory hypotheses: reasoning from effects to causes	188
8.4.1	The method of agreement	191
8.4.2	The method of difference	192

8.4.3	The joint method of agreement and difference	193
8.4.4	A more complex case	194
8.4.5	An assessment of Mill's methods	195
8.5	Conclusion	196
9	Statistical reasoning	197
9.1	Introduction	197
9.2	Reasoning with purely statistical generalizations	198
9.2.1	Lack of relationship between the target and measured property	199
9.2.2	Cardinality of the sample	200
9.2.3	Biased samples	201
9.2.4	Question biases	203
9.2.5	Hidden variables	204
9.2.6	Some considerations on the margin of error	204
9.2.7	Statistical generalizations and daily life	205
9.3	Generalizations concerning the future	205
9.4	Statistical syllogism	208
9.4.1	Statistical syllogisms and reference classes	210
9.5	Conclusion	212
10	Probability and probability biases	213
10.1	Introduction	213
10.2	Three interpretations of probability	215
10.2.1	The classical interpretation	216
10.2.2	The frequentist interpretation	217
10.2.3	The subjective interpretation	218
10.3	Basic aspects of probability theory	220
10.3.1	Rules for intersection	223
10.3.2	Rules for union	224
10.3.3	Rule for complement event	225
10.3.4	Bayes' theorem	226
10.4	Two probabilistic reasoning problems, and some fallacies	230
10.4.1	The cab problem	232
10.4.2	The prosecutor's fallacy	233
10.5	Risk and fundamental uncertainty	234
10.5.1	Risk	234
10.5.2	Fundamental uncertainty	235
10.6	Conclusion	237

11	Reasoning by analogy	239
11.1	Introduction	239
11.2	Structure of arguments by analogy and evaluation criteria	240
11.3	Reasoning by analogy with cognitive purposes	241
11.4	Analogy in legal reasoning	242
11.5	Analogy in moral reasoning	245
11.6	Conclusion	246
